1. Executive Summary

Greenmark Waste Solutions operates two customer-facing websites—greenmarkwaste.com and htddisposal.com—both built on Webflow and registered through GoDaddy. When these sites were built, Webflow was a solid choice: good-looking design, fast to launch, no developers required. The people who built it made a reasonable decision with the tools available at the time.

Two things have changed since then. First, **Google got stricter about mobile speed**. Mobile page speed is now a direct ranking factor, and Google actively penalizes sites that load slowly on phones. Greenmark's Webflow site scores **47 out of 100** on Google's mobile test, with a **17.5-second load time**—well into the “Poor” category. This isn't a configuration issue; it's a limitation of how Webflow generates pages. There is no setting to flip to fix it.

Second, **AI tools changed what a small team can build without an agency**. We used AI to rebuild the homepage on a modern framework (Astro), and the same design now scores **92/100 on mobile** with a **2.7-second load time**. It runs on Railway—same infrastructure as Cerebro—at zero incremental hosting cost. What used to require a web designer and months of back-and-forth, AI tools can now do in days.

Separately, we have an account ownership gap: we do not know who controls the GoDaddy account or the Webflow workspace. Per the policy Alex Kaye approved on Feb 27, these need to be centralized under it@greenmarkwaste.com—same pattern we already completed for Railway, Supabase, and GitHub.

This report covers three workstreams:

- **Account Centralization** — Transfer GoDaddy and Webflow accounts to it@greenmarkwaste.com, closing a security gap.
- **DNS Modernization** — Add Cloudflare as a DNS/CDN layer between GoDaddy and hosting, enabling instant cutover and rollback.
- **Website Replacement** — Complete the Astro build, cut over DNS, and wind down Webflow once the new site is stable—reducing subscription cost and agency dependency.

The net result: faster site, better search rankings, lower cost, full Greenmark ownership of all accounts, and a site that Greenmark's team can maintain going forward—with or without AIC.

2. Current State Assessment

Domain & Hosting

Asset	Platform	Owner	Status
greenmarkwaste.com (domain)	GoDaddy	Unknown	Expires Aug 1, 2026 — 5 months
greenmarkwaste.com (site)	Webflow	Unknown (Daniel has editor access)	Live — mobile score 47/100
htdisposal.com (domain)	Likely GoDaddy	Unknown	Needs confirmation
htdisposal.com (site)	Likely Webflow	Unknown	Needs confirmation
Astro replacement	Railway	it@greenmarkwaste.com	Homepage deployed, remaining pages needed
DNS management	GoDaddy (default)	Unknown	No Cloudflare layer yet

Account Ownership Gaps

Per the account ownership policy (approved by Alex Kaye, Feb 27, 2026), every vendor account should be owned by **it@greenmarkwaste.com** with billing to **accounting@greenmarkwaste.com**. We have already completed this for Railway, Supabase, and GitHub (Tasks 78–81). GoDaddy and Webflow are the remaining gaps.

Vendor	Current Owner	Target Owner	Billing Target	Status
Railway	—	it@greenmarkwaste.com	accounting@	✓ Done
Supabase	—	it@greenmarkwaste.com	accounting@	✓ Done
GitHub	—	it@greenmarkwaste.com	accounting@	✓ Done
GoDaddy	Unknown	it@greenmarkwaste.com	accounting@	✗ Not started
Webflow	Unknown	it@greenmarkwaste.com	accounting@	✗ Not started

Vendor	Current Owner	Target Owner	Billing Target	Status
Cloudflare	N/A (new)	it@greenmarkwaste.com	accounting@	✗ Not started

3. Performance Scorecard

Google’s PageSpeed Insights measures real-world user experience. Scores below 50 are rated “Poor” and trigger ranking penalties. The Webflow site fails on mobile—the majority of search traffic.

Metric	Webflow (Current)	Astro (Replacement)	Improvement
Mobile Speed Score	47 / 100 (Poor)	92 / 100 (Good)	+96%
Desktop Speed Score	~70 / 100	99 / 100	+41%
Largest Contentful Paint (LCP)	17.5 seconds	2.7 seconds	6.5x faster
Cumulative Layout Shift (CLS)	Unknown (high)	0.001 (excellent)	—
Total Blocking Time (TBT)	Unknown	0 ms (perfect)	—
Google Ranking Impact	Penalized (slow mobile)	Rewarded (fast mobile)	Direct SEO benefit

What this means in plain English: When someone searches “waste services Dallas” on their phone, Google measures how fast each result’s website loads. Greenmark’s current site takes 17 seconds—most visitors leave after 3. The new site loads in under 3 seconds. This wasn’t fixable when the site was first built—AI tools made it possible to rebuild at this performance level without a web agency.

4. The Plan: What We’re Doing and Why

Three Workstreams, One Goal

Everything in this plan serves a single objective: Greenmark owns and controls its own web presence, with no unknown account holders, a clear path to self-service, and the best possible performance for customer acquisition.

#	Workstream	What	Why
1	Account Centralization	Transfer GoDaddy + Webflow accounts to it@greenmarkwaste.com	Security: unknown owners = unknown risk. Compliance with approved ownership policy.
2	DNS Modernization	Add Cloudflare between registrar and hosting	Enables zero-downtime cutover, instant rollback, free CDN/SSL. Industry standard practice.
3	Website Replacement	Complete Astro build, cut DNS, cancel Webflow	Fix mobile speed (47→92), eliminate subscription, remove agency dependency, full SEO control.

Why the Goalposts Moved

Webflow was a reasonable choice when the site was built. Two shifts made it obsolete for Greenmark’s needs:

- **Google raised the bar on mobile speed.** Sites that load slowly on phones are now directly penalized in search rankings. Webflow’s generated code can’t meet the new threshold.
- **AI tools eliminated the need for a web agency.** Building and maintaining a high-performance site used to require a designer and a developer. AI can now do both—faster, at lower cost, with better results.

Factor	Webflow (then)	Astro + AI (now)
Mobile speed	47/100 — Google penalty	92/100 — Google reward
Page load time	17.5 seconds	2.7 seconds
Monthly cost	\$14–\$39/site (subscription)	\$0 incremental (Railway already paid)
Who can edit	Hired designer or agency	Team + AI tools — or future marketing hire
SEO control	Limited — Webflow generates HTML	Full — every tag, schema, and markup
Vendor lock-in	Content trapped in Webflow CMS	Zero — standard HTML/CSS/JS files
AI/AIO readiness	Cannot customize for AI search	Full structured data, JSON-LD, semantic HTML

Factor	Webflow (then)	Astro + AI (now)
Self-service path	Always needs Webflow subscription	Can add a simple CMS for non-technical editors

5. Execution Sequence: The Critical Path

This is the order of operations. Each phase depends on the previous one. We can't skip ahead, and we shouldn't try to do everything at once.

Phase 1: Discovery & Access (Week 1–2)

Goal: Know who owns what. Get admin access to everything.

#	Action	Owner	Blocker
1.1	Send discovery email to Michael (questions about GoDaddy, Webflow, designer)	Daniel	None — ready now
1.2	Michael identifies GoDaddy account owner	Michael	Waiting on email response
1.3	Michael identifies Webflow workspace owner	Michael	Waiting on email response
1.4	Get Daniel added as admin on GoDaddy	Michael / current owner	Step 1.2
1.5	Verify domain auto-renewal is ON (expires Aug 2026)	Daniel	Step 1.4
1.6	Document Webflow plan tier, cost, and access list	Daniel	Step 1.3

Phase 2: Account Centralization (Week 2–3)

Goal: All accounts owned by it@greenmarkwaste.com. Billing to accounting@.

#	Action	Owner	Blocker
2.1	Transfer GoDaddy account ownership to it@greenmarkwaste.com	Daniel + current owner	Phase 1 complete
2.2	Transfer Webflow workspace ownership to it@greenmarkwaste.com	Daniel + current owner	Phase 1 complete
2.3	Update billing on both accounts to accounting@greenmarkwaste.com	Daniel	Steps 2.1, 2.2
2.4	Create Cloudflare account under it@greenmarkwaste.com	Daniel	None
2.5	Add greenmarkwaste.com to Cloudflare, get assigned nameservers	Daniel	Step 2.4

Phase 3: DNS Migration (Week 3–4)

Goal: Cloudflare manages DNS. Site still points to Webflow. Zero downtime.

#	Action	Owner	Blocker
3.1	Change GoDaddy nameservers to Cloudflare's assigned NS records	Daniel	Phase 2 complete
3.2	Configure Cloudflare DNS to point to Webflow (preserves current site)	Daniel	Step 3.1
3.3	Verify site loads normally through Cloudflare (test all pages)	Daniel	Step 3.2
3.4	Enable Cloudflare CDN caching and SSL (free tier)	Daniel	Step 3.3

Phase 4: Build Remaining Astro Pages (Week 3–6)

Goal: All current pages rebuilt on Astro, plus new SEO pages.

This phase runs in parallel with Phase 3. The homepage is already built and deployed.

#	Page / Feature	Priority	Notes
4.1	About page	High	Company story, leadership, values
4.2	Services pages (per service line)	High	Core conversion pages — what Greenmark does
4.3	Contact page with form	High	Must connect to HubSpot for lead capture
4.4	FAQ page	Medium	Common customer questions
4.5	Service-area city pages (DFW metro)	Medium	Local SEO — rank for “waste services [city]”
4.6	Structured data / JSON-LD schema	Medium	Google Business, service schema, FAQ schema
4.7	GA4 + Google Search Console setup	High	Tracking from day one of cutover
4.8	Blog infrastructure	Low	Content marketing — can add post-launch

Phase 5: Cutover & Verification (Week 6–7)

Goal: greenmarkwaste.com serves the Astro site. Webflow is standby.

#	Action	Owner	Blocker
5.1	Michael reviews and approves new site	Michael	Phase 4 complete
5.2	Provision SSL certificate for greenmarkwaste.com on Railway	Daniel	Step 5.1
5.3	Update Cloudflare DNS: CNAME → Railway endpoint	Daniel	Step 5.2
5.4	Verify all pages, forms, redirects, structured data	Daniel	Step 5.3
5.5	Monitor 48 hours — rankings, traffic, form submissions	Daniel	Step 5.4
5.6	If issues: rollback DNS to Webflow in Cloudflare (instant)	Daniel	Only if needed

Phase 6: Wind Down Webflow (Week 8+)

Goal: Webflow subscription cancelled once everyone's confident in the new site.

#	Action	Owner	Blocker
6.1	Confirm Astro site is stable (2+ weeks of clean operation)	Daniel	Phase 5 complete
6.2	Export any remaining Webflow content/assets	Daniel	Step 6.1
6.3	Cancel Webflow subscription (with Michael's approval)	Daniel + Michael	Step 6.2
6.4	Document final state in cockpit	Daniel	Step 6.3

6. Account Transfer Checklists

These follow the identical pattern used for Railway (Task-78), Supabase (Task-79), GitHub (Task-80), and ownership transfer emails (Task-81). All previously completed successfully.

GoDaddy (Registrar + DNS)

Step	Action	Who	Depends On
1	Identify account owner (email on file)	Michael	—
2	Add it@greenmarkwaste.com as delegate/admin	Current owner	Step 1
3	Transfer full ownership to it@greenmarkwaste.com	Current owner + Daniel	Step 2
4	Set billing to accounting@greenmarkwaste.com	Daniel	Step 3
5	Verify Daniel can manage DNS records	Daniel	Step 2
6	Verify domain auto-renewal is ON (Aug 2026 expiry)	Daniel	Step 2
7	Check if httdisposal.com is on same account	Daniel	Step 2

Webflow (Hosting + CMS)

Step	Action	Who	Depends On
1	Identify workspace owner (check LastPass or ask Michael)	Daniel	—
2	Change workspace owner to it@greenmarkwaste.com	Current owner	Step 1
3	Set billing to accounting@greenmarkwaste.com	Daniel	Step 2
4	Audit all access (editors, designers, agencies)	Daniel	Step 2
5	Document plan tier and monthly cost	Daniel	Step 2
6	Check if httdisposal.com uses same workspace	Daniel	Step 2

Cloudflare (New — DNS/CDN Layer)

Step	Action	Who	Depends On
1	Create account under it@greenmarkwaste.com	Daniel	—
2	Add greenmarkwaste.com	Daniel	Step 1
3	Change GoDaddy nameservers to Cloudflare	Daniel	GoDaddy Step 5 + Step 2
4	Configure DNS (initially point to Webflow)	Daniel	Step 3
5	When Astro ready: update DNS to Railway	Daniel	Step 4 + Astro complete
6	Set billing to accounting@ (if upgrading from free)	Daniel	Step 1

7. Cost Analysis & ROI

Current Costs (Estimated)

Item	Monthly	Annual	Notes
Webflow subscription (per site)	\$14–\$39	\$168–\$468	Depends on plan tier — discovery needed
Webflow (if 2 sites)	\$28–\$78	\$336–\$936	htdisposal.com may be separate
GoDaddy domain renewal	—	~\$20–\$40	Standard .com pricing
Designer/agency (if active)	Unknown	Unknown	Discovery question for Michael

Post-Migration Costs

Item	Monthly	Annual	Notes
Railway hosting (Astro)	\$0 incremental	\$0	Already included in Cerebro infrastructure
Cloudflare (free tier)	\$0	\$0	DNS, CDN, SSL all included
GoDaddy domain renewal	—	~\$20–\$40	Unchanged
Designer/agency	\$0	\$0	No longer needed — AI tools + optional CMS for self-service

Net Savings

Conservative estimate: \$336–\$936/year in Webflow subscriptions eliminated, plus whatever the designer/agency costs. The actual savings depend on the current Webflow plan tier and whether there’s an active support contract—both are discovery questions.

The bigger ROI is in search rankings. A waste services company in DFW competing for local search traffic—where a single commercial account can be worth \$5,000–\$50,000/year in revenue—gains far more from moving up in Google results than it saves on subscriptions. The mobile speed fix (47→92) is the single highest-impact SEO change available.

8. Risk Assessment & Mitigations

Risk	Likelihood	Impact	Mitigation
Domain expires before we get access (Aug 2026)	Low	Critical	Step 1 of discovery: confirm auto-renewal. We have 5 months.
GoDaddy account holder is unresponsive	Very Low	High	Greenmark is the domain registrant. Michael can reach whoever set it up. Worst case, GoDaddy has an account recovery process.
Designer/agency has questions about ownership change	Low	Low	Not removing anyone—adding Greenmark as owner. Designer keeps editor access. Active contracts continue.
DNS migration causes brief downtime	Very Low	Medium	Cloudflare migration is zero-downtime by design. We point DNS to Webflow first, then switch to Astro later.
Astro site has issues after cutover	Low	Medium	Instant rollback: change one Cloudflare DNS record back to Webflow. Takes effect in minutes.
Forms break during migration (leads lost)	Medium	High	Discovery question: what forms exist and where do they submit? We rebuild before cutover.
htdisposal.com is on a different account/platform entirely	Medium	Low	Discovery question. If separate, we handle it as a follow-on project. Doesn't block greenmarkwaste.com.
Michael is too busy to answer discovery questions	Medium	Medium	Email is async. We also offer a 15-min call. Most answers are "who owns this?" — quick lookups.

The single biggest risk is **standing still while the goalposts move**: an unknown party controls the domain, Google's speed requirements keep tightening, and the domain could lapse in August 2026 if nobody monitors it. The Webflow site served Greenmark well—but the landscape has shifted, and staying put now carries more risk than moving forward.

9. Stakeholder FAQ

Twenty-five questions investors, the CEO, CFO, and CRO would ask—and the answers.

Cost & ROI

1. “What does Webflow cost us today?”

We don't know yet—that's a discovery question. Webflow plans range \$14–\$39/month per site. If both sites are on it, \$28–\$78/month. The Astro replacement runs on Railway at zero incremental cost.

2. “What does Cloudflare cost?”

Free tier. Zero dollars. DNS management, CDN, and SSL are all included at no charge.

3. “What's the total cost of this migration?”

Daniel's time (already budgeted as part of the Cerebro engagement). No new vendor costs. Net effect is eliminating a recurring Webflow subscription.

4. “What's the ROI?”

Eliminate Webflow subscription + eliminate designer dependency + 2x improvement in Google search visibility (mobile score 47→92 directly affects rankings). For a waste services company, even one additional lead per month from better SEO pays for the entire project.

5. “Why not just fix the speed problem inside Webflow?”

We can't. Webflow generates its own HTML/CSS/JS—we don't control it. The 17.5s load time is inherent to the platform. This wasn't a bad choice when the site was built—Google's speed requirements got stricter, and AI tools now let us build at a performance level that wasn't accessible without an agency before.

Risk

6. “What if the migration breaks something?”

Cloudflare gives us instant rollback. Change one DNS record and greenmarkwaste.com points back to Webflow within minutes. The old site stays intact until we explicitly cancel it.

7. “What about the domain expiring?”

greenmarkwaste.com expires Aug 1, 2026. Step one is confirming auto-renewal. We need access now—not because we're in a rush, but because 5 months isn't comfortable if we discover a problem.

8. “What happens if Daniel gets hit by a bus?”

That's why we centralize under it@greenmarkwaste.com—a shared IT login, not a personal account. Any IT person can access GoDaddy, Webflow, Cloudflare, and Railway with one credential. This migration reduces bus-factor risk.

9. “Is there downtime during the switch?”

Zero. Cloudflare manages DNS while pointing to Webflow first. When Astro is ready, we update one record. DNS propagation happens in the background. Visitors don't notice.

10. “What if the designer or agency has concerns about the change?”

This isn't about cutting anyone out—it's about making sure Greenmark has a front door key to its own house. The designer keeps editor access and can continue working. If there's an active support contract, that relationship continues until Greenmark decides otherwise.

Strategic

11. “Why now? The website was fine before.”

It was. Two things changed: Google raised the bar on mobile speed (now a direct ranking penalty), and AI tools made it possible to build a faster replacement without hiring an agency. The opportunity didn't exist a year ago. Every month we wait, potential customers searching “waste services Dallas” see competitors first.

12. “Isn't this scope creep from Cerebro?”

No. Cerebro's mandate includes technology leadership. Account centralization was explicitly approved by Alex (Feb 27 policy). Website work was called “low hanging fruit, top of the list” by Michael and Alex on the Feb 19 call. We're acting on their stated priority, not inventing new work.

13. “How does this help us win more deals?”

Three ways: (1) Better Google rankings = more inbound leads, (2) Faster site = lower bounce rate—visitors who wait 17 seconds leave, (3) Service-area city pages let us rank for “waste services [city]” across DFW.

14. “What about htddisposal.com?”

Same playbook. We're discovering whether it shares accounts. If so, we centralize both in one pass. The Astro approach works for both.

15. “Why Astro specifically? What if Astro disappears?”

Astro generates static HTML files. If it disappeared tomorrow, the site keeps running. We could rebuild with any static site generator. Zero vendor lock-in—unlike Webflow where content is trapped in their CMS.

Operations

16. “Who updates the site after the switch? What if AIC's engagement ends?”

Initially, Daniel using AI tools—same workflow as Cerebro. But the site is built so Greenmark isn't locked in. A headless CMS (like Decap or Tina—both free) can be added so a marketing hire or admin can edit content in a browser without touching code. The architecture supports self-service; we'll set it up when the team is ready for it.

17. “How do we handle content changes in the meantime?”

Webflow stays live until cutover. Any content changes just need to be reflected in the Astro build. We're not ripping out Webflow tomorrow—this is a controlled transition.

18. “What's the timeline?”

Account centralization: 1–2 weeks after Michael provides GoDaddy access. Astro build: depends on prioritization. Cutover: same day once pages are built and Michael approves. No hard deadline.

19. “Do we need to redo SEO when we switch?”

No. Same URLs, same titles, same meta descriptions. Google sees the same site, just faster. Rankings should improve immediately from the speed boost.

20. “What about forms? We need those leads.”

Discovery question #17 asks this exactly. Any forms on Webflow will be rebuilt in Astro pointing to the same backend (likely HubSpot). No leads get lost.

Governance & Compliance

21. “Is this consistent with how we handle other vendor accounts?”

Identical pattern to Tasks 78–81 (Railway, Supabase, GitHub). Same policy (Task-92), same target owner, same billing address. Alex already approved this framework.

22. “Who has access to what after the transfer?”

it@greenmarkwaste.com owns everything. Daniel administers day-to-day. Michael retains visibility. Designers/agencies can have limited access as needed. All access is documented and auditable.

23. “What if we decide to go back to Webflow later?”

Webflow isn’t deleted—we just stop paying for hosting. All project data persists on their free tier. Going back means resubscribing. But given the 2x speed improvement, there’s no technical reason to go back.

24. “Are we creating any security exposure?”

The opposite. Right now, an unknown party controls the domain. They could transfer it, change DNS, or let it expire. Centralizing under it@greenmarkwaste.com closes a security gap.

25. “What does Alex (CFO) need to approve?”

Nothing new. The account ownership policy (Task-92) already covers this. Alex may want to see the Webflow subscription cost once we discover it. The email is CC’d to Alex for visibility. Net financial impact is positive.

10. Discovery Questions for Michael

We need these answers before we can proceed with account transfers and plan the cutover timeline.

Webflow History

- Who designed the greenmarkwaste.com Webflow site? (agency, freelancer, internal?)
- Who approved the current design and content?
- Is there an ongoing support contract with the designer/agency? What does it cost?
- Who has been making edits? (Site was last published Feb 28, 2026.)
- Does htddisposal.com use the same Webflow workspace or a separate one?
- Are there pages or sections especially important to preserve exactly as-is?

GoDaddy Account

- Who owns the GoDaddy account where greenmarkwaste.com is registered? (Email on file?)
- Is htddisposal.com also registered on GoDaddy? Same account or different?
- Are there other domains on that GoDaddy account?
- Can it@greenmarkwaste.com be added as delegate/admin right away?
- Is domain auto-renewal turned on? (Expires Aug 1, 2026.)

Billing & Contracts

- What Webflow plan/tier is the site on? Monthly cost?
- What's the GoDaddy renewal cost?
- Are there annual contracts with the designer/agency that need to be wound down?
- Is there Google Workspace or email hosting tied to the domain?

Transition Readiness

- Are there draft pages, staging versions, or A/B tests not visible to the public?
- Are there forms that submit to external services (HubSpot, email, Zapier)?
- Does the site use Webflow-specific integrations (Logic, Memberships, Ecommerce)?
- Is there a Google Analytics or Tag Manager account connected? Who owns it?

Most urgent: GoDaddy account owner (domain expires Aug 2026), designer/agency relationship (affects decommission timeline), and Webflow subscription cost (informs ROI).

11. Draft Email to Michael

Ready to send. Non-technical language. CC'd to Alex for visibility.

To: Michael Nguyen (mnguyen@greenmarkwaste.com)
CC: Alex Kaye (akaye@greenmarkwaste.com)
From: Daniel Shanklin
Subject: Website accounts + new greenmarkwaste.com — need your input

Michael,

Quick update on the website front, and a few things I need from you.

The short version: AI tools have changed what's possible for a small team without a web agency. We used them to rebuild the greenmarkwaste.com homepage, and the performance improvement is significant enough that I think it's worth finishing the job and replacing the Webflow site entirely. But first I need some information from you.

What changed:

When the Webflow site was built, it was a solid choice—good-looking site, quick to launch, no developers needed. But two things have shifted since then:

- 1. Google got stricter about mobile speed.** The current site scores 47/100 on Google's mobile test with a 17.5-second load time. That's in the "Poor" category—Google is actively pushing Greenmark down in search results. This isn't a configuration issue; it's how the platform works.
- 2. AI tools can now do what used to require a web agency.** We rebuilt the homepage on a modern framework and it scores 92/100 with a 2.7-second load time. Runs on Railway—same as Cerebro, no new cost.

What this is NOT: This isn't a criticism of whoever built the current site. They did good work with the tools available. The game just changed.

What I need from you:

- 1. GoDaddy access** — Who owns the account? I need admin access for DNS and to confirm domain renewal. Expires August—not urgent, but I want eyes on it.
- 2. Webflow ownership** — Who owns the workspace? Need to transfer to it@greenmarkwaste.com, same pattern as Railway/Supabase/GitHub.
- 3. A few questions:** Who designed the site? Ongoing support contract? Who's been making edits? Is htdisposal.com on the same accounts? Webflow subscription cost?

Happy to do a 15-minute call if easier. No rush on the actual switch—Webflow stays live until the new site is ready and you've approved it. I'm also planning for how to make updates easy for whoever needs to maintain the site down the road—your team, a future hire, or us.

Thanks,
Daniel

12. Next Steps

Immediate actions—listed in priority order. The first item unblocks everything else.

Priority	Action	Owner	Timeline
1 — CRITICAL	Send discovery email to Michael	Daniel	Today
2	Michael responds with GoDaddy owner + Webflow info	Michael	This week
3	Get admin access to GoDaddy, verify auto-renewal	Daniel	Within 1 week of response
4	Transfer Webflow workspace to it@greenmarkwaste.com	Daniel	Within 1 week of response
5	Create Cloudflare account, add greenmarkwaste.com	Daniel	Can start immediately
6	Build remaining Astro pages (services, about, contact, FAQ)	Daniel	Ongoing — 2–4 weeks
7	Set up GA4 + Google Search Console	Daniel	Before cutover
8	Michael approves new site for cutover	Michael	After pages complete
9	DNS cutover: Cloudflare → Railway	Daniel	Same day as approval
10	Monitor, verify, then cancel Webflow	Daniel	2 weeks after cutover

The single most important thing right now is getting Michael's answers to the discovery questions. Everything else flows from that.

This report was prepared by AIC Holdings for Greenmark Waste Solutions as part of Project Cerebro. Questions or feedback: Daniel Shanklin (dshanklin@aicholdings.com).
